CTM®
Compagnia Tecnica Motori s.p.a.
Since 1958

Company

Founded in 1958 by a group of pioneering entrepreneurs, CTM's mission is to design and manufacture Generating Sets to be utilised in the energy production process. Today, the CTM Group offers a strong diverse manufacturing capability certified to UNI EN ISO 9001:2008 and UNI EN ISO 14001:2004; able to respond to the challenges of an increasingly selective global market with innovative products and solutions. In its 25.000 sq.m sized facility situated in Cesano Boscone, Milan, the company has established itself in manufacturing state-of-the-art products. CTM undertakes the role of a professional and reliable interlocutor to International customers.

CTM by NUMBERS

- Products Installed, over **10.000 units**
- Countries covered, **90**
- Total factory plant area, **25.000 square meter**
- Annual turnover, over **60.000.000€**
- **70% of our turnover** is generated through **overseas sales**

The CTM'S Diesel Gen Sets are designed according to International Standards and rules

NFPA 70	National electrical code
NFPA 110	Standard for Emergency and Standby Power Systems
UL 142	Atmospheric tanks Construction Standards
EN 60079	Explosive atmospheres
DIRECTIVE 2014/34/EU	"Equipment and protective systems intended for use in potentially explosive atmospheres"

The Generating Sets, according with the type of purpose they are requested by the customer, are rated according to ISO 8528 performance nomenclature, as listed below:

Continuous operation at constant load – COP,

is defined as capability to deliver power supplying a constant electrical load for an unlimited numbers of hours per year, between stated maintenance intervals and under the stated ambient conditions, as prescribed by the engine's manufacturer.

Continuous operation at varying load – PRP,

is the maximum power available during a variable power sequence, which may be run for an unlimited number of hours per year, between stated maintenance intervals and under the stated ambient conditions as prescribed by the engine's manufacturer. The permissible average output power (P_{pp}) during a 24 hours period shall not exceed some percentage of the prime power to be stated by the engine's manufacturer (typically 70-80% of the PRP).

Limited Time Operation – LTP

is the maximum power available which the Generating Set is capable of delivering for up to 500 hr per year, between stated maintenance intervals and under the stated ambient conditions as prescribed by the engine's manufacturer.

Emergency Standby Power – ESP,

is the maximum power available during a variable power sequence, for which the Generator Set is capable of delivering power for up to 200 h per year, between stated maintenance intervals and under the stated ambient conditions, as prescribed by the engine's manufacturer. The permissible average output power (P_{pp}) during a 24 hours period shall not exceed 70% of the ESP unless otherwise agreed by the engine manufacturer.

normative references

In addition to the Power Rating nomenclature, the ISO 8528 establishes four different "Performance Classes" the Generating Set has to perform to cover the various requirements of the different electrical loads. The classes are listed below:

Class G1

This applies to generating set applications where the connected loads are such that only basic parameters of voltage and frequency need to be specified.

EXAMPLE General-purpose applications (lighting and other simple electrical loads).

Class G2

This applies to generating set applications where its voltage characteristics are very similar to those for the commercial public utility electrical power system with which it operates. When load changes occur, there may be temporary but acceptable deviations of voltage and frequency.

EXAMPLE Lighting systems, pumps, fans and hoists.

Class G3

This applies to applications where the connected equipment makes severe demands on the stability and level of the frequency, voltage and waveform characteristics of the electrical power supplied by the generating set.

EXAMPLE Telecommunications and thyristor-controlled loads. It should be remembered that both rectifier and thyristor-controlled loads may need special consideration with respect to their effect on generator-voltage waveform.

Class G4

This applies to applications where the demands made on the stability and level of the frequency, voltage and waveform characteristics of the electrical power supplied by the generating set are exceptionally severe.

EXAMPLE Data-processing equipment or computer systems.

Emissions requirements

Compagnia Tecnica Motori offers a wide range of Generating Sets achieving compliance with stage IIIA for NRMM established by the European commission, Tier levels established by the EPA in USA and Ta Luft in Europe.

Due to the nature of the European Union, the member states are free to follow different more stringent rules than the European Commission directives. Such is the case for several countries, including France and Germany, that regulate stationary Generating Sets. It is important to note that different countries, even different cities, may have different rules and it is easy to get lost and not understand which ones to comply with.

Compagnia Tecnica Motori, can support its customers with the selection of the right engine or, when necessary, the use of SCR based emission after treatment, to meet every specific emission level with our Diesel Generating Sets.

Specifications

Engines

Reciprocating internal combustion diesel engines configuration includes: multi-cylinders in-line or "V" disposal, naturally aspirated or turbocharged, intercooled with mechanical governor or electronic upon request, or "common rail" type with electronic control to reduce fuel consumptions and exhaust emissions. Engines are equipped with air filters with replaceable elements with restrictor indicators. All rotating machinery and hot elements are equipped with safety guards. Engines are complete with electric starting systems (alternative options are available upon request) with starting motor and alternator battery charger 12 V or 24 V.

Base frames

Metallic base frames made in UNP sections or in S235 JR UNI7070 welded steel sections according to ASME IX directives. All base frames are equipped with lifting points. The base frames can be complete with integral fuel tanks which can be of variable capacity to meet the customer's requirements and applicable regulations.

Cooling system

The cooling of the engine is undertaken by the radiator with a pusher fan, mechanically engine driven by belts or by electric motor fans; alternatively separate cooling systems with a top tank and level indicators can be provided (upon request). The cooling system comprises a preheating system with thermostatic control and circulating pump for generating sets of medium/high ratings.

Generators

Alternators are synchronous, three phases, static excitation, brushless, self regulated and self ventilated, with IC-01 IC-0A1 system in compliance with IEC 34, VDE 0530, DIN-EN 60034 directives, suitable for 50 Hz or 60 Hz, IP23 protection degree or different upon request. The standard mounting is a single bearing configuration and, on demand, double bearing is available. All alternators are equipped by automatic voltage regulator electronic type and, upon request, by permanent magnet and other accessories. Insulation is actually in class H, on demand, F or B.

Control panels

The standard control panels are "Floor Standing" made of sheet steel structural work with IP44 minimum mechanical protection and 2B separation form – compliant with CEI – IEC – EN standards for electrical panels. The panels can be installed on board the unit or free standing and are normally complete with a GenSet protection breaker and controls for external switching. When requested, the control panels, are 4B separation form, including bus-bar or cables connections. All panels are fitted with microprocessor advanced generating set control boards with PLC functions on request. Each panel can be customised to meet any specific requirement.

The control boards offered in the "standard" configuration are the following:

■ GC 350

Advanced AMF controller for stand-by gensets. Extensive configurability thanks to the many input and output available.

■ GC 600

Synchro/Parallel controller for Island mode and Mains parallel functions with integrated PLC operations. The controller is provided with a colour display and a huge set of communication serial ports to be integrated with an external BMS.

■ DST 4602 Evolution

Advanced Synchro/Parallel controller for Island mode and Mains parallel function (integrated PLC editor) up to 24 gensets connected on the same bus. Thanks to the huge number of I/O available and the possibility to expand them, the DST 4602 Evolution is the perfect solution for CHP plants also.

control panels

A wide range of soundproof systems with acoustic insulated materials Euroclass A1 fire resistant, as part of the CTM's effort!

Containers

The containers are designed and built in accordance with the customer needs. They are complete with integral corner lifting/fixing points for lifting/road transportation. The containers are provided with double/single doors with handles and latches in stainless steel.

Standard dimensions of containers

20'	6055 x 2435 x 2590 mm	length x Width x Height mm
25'	7500 x 2435 x 2590 mm	length x Width x Height mm
30'	9125 x 2435 x 2590 mm	length x Width x Height mm
40'	12190 x 2435 x 2590 mm	length x Width x Height mm
45'	13600 x 2435 x 2590 mm	length x Width x Height mm

Special dimensions on request

Services

Spare parts

Compagnia Tecnica Motori offers a full range of services and spare parts to get the most from his Generating Sets. In our 1500 sq.m warehouse, the customer can find genuine spare parts and consumables for Mitsubishi, Hatz, MTU, Waukesha, Volvo Penta, Cummins, Perkins and Ford engines.

In addition to the engine components, we have available a great assortment of components, both mechanical and electrical, for the Generating Sets.

Maintenance services

Thanks to our preventive maintenance and repair plans, we can offer reliable services to our customers to get the best from our Generating Sets. All the preventive scheduled plans are designed according to the customer's needs whilst respecting the engine maintenance requirement; which are specific to every engine.

Our technicians and senior engineers are regularly trained and fully equipped; they are ready to travel all over the world to satisfy the customer's needs.

Turnkey Solution

Compagnia Tecnica Motori has a relevant experience in managing all aspects of Civil, Mechanical and Electrical works, relating to the installation of: Generating Sets, CHP plants, Fire Pumps and Rotary UPSs. All the constructions activities are undertaken according to International construction and quality standards.

The areas of specialisation include:

- Executive Design and construction
- Project Management
- Construction supervision
- Civil works
- Construction and assembly
- Final commissioning and testing
